

AIDAR — PRODUCT REQUIREMENTS DOCUMENT

Product Name: Aidar **Domain:** getaidar.com **Legal Entity:** EML Global Ventures Limited (incorporation of Aidar Technologies Limited pending) **Document Status:** MVP Build Reference — Version 2 (Living Document) **Tech Stack:** Lovable.dev (React + Supabase application generation), Supabase (database, auth, storage, edge functions, realtime), Paystack (payments), Google Maps Platform (location services), Resend (transactional email) **Last Updated:** June 2026

1. EXECUTIVE SUMMARY

Aidar is a healthcare discovery and booking platform built for Lagos, Nigeria, with a roadmap for expansion across Nigeria and West Africa. The platform connects patients with verified medical practitioners and medical facilities for three types of care delivery: clinic visits, home visits, and virtual consultations.

Aidar's core differentiation is a trust and safety layer that does not exist in comparable Nigerian healthtech products: MDCN-verified practitioner credentials, ID-verified patients for home visits, facility discovery with live maps and directions, an end-to-end booking and payment system with a structured dispute resolution process, booking-scoped in-app messaging, and transparent earnings tracking for practitioners.

2. PROBLEM STATEMENT

Nigeria has approximately one doctor per 5,000 people against a WHO recommendation of one per 600. However, the deeper problem is not purely a shortage of practitioners — it is a discovery and trust gap. Qualified, available practitioners exist across Lagos but patients have no reliable way to find them, verify their credentials, or book them. Meanwhile, practitioners with unfilled appointment slots have no digital channel to reach patients who need care.

Existing solutions address only fragments of this problem:

Existing Solution	Limitation

Helium Health	B2B hospital software, not consumer-facing
Kangpe / Wellvis	Teleconsultation only, no in-person discovery
MedxVerse	AI-driven teleconsultation, e-pharmacy, and health records, but no practitioner/facility discovery, no home visits, no MDCN verification
Google Maps / word of mouth	No verification, no booking, no trust layer

Aidar fills this gap by combining discovery, verification, and end-to-end booking across all three modes of care.

3. USER TYPES

The platform supports four user types, each with distinct permissions and dashboards:

User Type	Description	Can Book?	Can Be Booked?
Patient	Searches for and books healthcare services	Yes	No
Practitioner	Independent medical professional listing services	No	Yes
Facility	Hospital, clinic, lab, pharmacy, or other medical facility	No	No (discoverable, contactable)
Admin	Platform operator managing verification, disputes, and oversight	N/A	N/A

Practitioners and facilities retain full search and discovery access (including map view, profiles, directions, and contact methods) but cannot initiate bookings or be patients. This restriction is enforced on both frontend (hidden buttons) and backend (blocked API calls) based on the `user_type` field in the `profiles` table.

4. AUTHENTICATION & ACCOUNT MANAGEMENT

4.1 Signup Flows

All signup is handled via **Supabase Auth**, which automatically hashes passwords using bcrypt. No custom password storage exists anywhere in the system.

Patient Signup

- Fields: full name, email, phone number, password (all required)
- On submit → Supabase Auth confirmation email sent
- After email confirmation → redirected to login → patient dashboard

Practitioner Signup

- Fields: full name, email, phone number, specialty (dropdown), password (all required)
- After confirmation and login → redirected to practitioner onboarding (5 steps)

Facility Signup

- Fields: full name, email, phone number, password (all required)
- After confirmation and login → redirected to facility onboarding (5 steps)

4.2 Login

- Patients → patient dashboard
- Practitioners → practitioner dashboard, or onboarding if incomplete
- Facilities → facility dashboard, or onboarding if incomplete
- Admins → `/admin` (non-admins attempting `/admin` are redirected to homepage)

4.3 Password Reset

- "Forgot Password" link on login page
- Email sent via Supabase Auth (routed through Resend for branded delivery)
- User sets new password and is redirected to login

4.4 Field Validation Rules

All fields across all signup and onboarding forms are required, with the following exceptions explicitly marked optional:

- Practitioner: clinic/practice name, home visit fee (only if home visits enabled), virtual consultation fee and platform (only if virtual enabled)

- Facility: year established, website URL, HEFAMAA license number, CAC registration number

Required fields display a red asterisk; attempting to proceed without completing them shows an inline error ("This field is required") and auto-scrolls to the first incomplete field.

Email format validation:

- Must contain @ , valid domain, no spaces, minimum 2 characters before @ and after the final .
- Real-time validation with green tick on valid input

Phone number validation (Nigerian format):

- Accepted formats: 08xxxxxxxxxx (11 digits), +2348xxxxxxxxxx , 2348xxxxxxxxxx
- Must start with valid Nigerian prefixes (070, 080, 081, 090, 091)
- No letters, spaces, or special characters except leading +
- Real-time validation with inline error messages

4.5 Duplicate Prevention

A single email address or phone number cannot be used to register more than one account, regardless of user type (patient, practitioner, or facility).

- Checks run in real time on field blur, not just on submit
- Email comparison is case-insensitive
- Phone comparison is normalized across 0 , +234 , and 234 prefixes
- Error message: *"This email address is already registered on our platform. Please use a different email or log in to your existing account."* (equivalent message for phone numbers)

5. PRACTITIONER ONBOARDING (5-STEP FLOW)

Step 1 — Personal Information

- Full name (pre-filled), phone number (pre-filled), WhatsApp number
- Profile photo upload
- Short bio (max 300 characters, with live character count)

Step 2 — Professional Details

- Specialty (dropdown — see Section 11 for full list)
- Qualifications (e.g., MBBS, FMCP)
- MDCN registration number
- Years of experience
- MDCN certificate upload (PDF or image)

Step 3 — Practice Details

- Clinic/practice name (optional)
- Lagos area (dropdown — 20 areas including Lekki, Victoria Island, Ikoyi, Ikeja, Surulere, Yaba, Maryland, Gbagada, Ojodu, Magodo, Ajah, Sangotedo, Badore, Festac, Apapa, Lagos Island, Mushin, Ketu, Mile 12, Ikorodu, Other)
- Full address
- Consultation fee (Naira)
- Home visits toggle → conditional home visit fee field
- Virtual consultations toggle → conditional virtual fee + preferred video platform (Google Meet, Zoom, WhatsApp Video Call, Microsoft Teams, Any Platform)

Step 4 — Payment Details (Bank Details)

- Bank name (dropdown of 30 major Nigerian banks including Access, GTBank, Zenith, UBA, Moniepoint, Opay, Kuda, etc.)
- Account number (10 digits, validated)
- Account name — auto-populated and verified via Paystack account resolution API
- Verification status shown (✓ Account verified, or error if resolution fails)
- Privacy notice: *"Your bank details are encrypted and stored securely. They are only used to process your consultation payouts and are never visible to patients."*
- Bank details are stored in `practitioners` table (`bank_name` , `account_number` , `account_name` , `bank_details_verified`) and are hidden from all patient-facing views and the public profile

Step 5 — Confirmation

- Full summary of all entered details, including bank details (account number masked to last 4 digits, e.g.,6789)
 - On submit: profile saved with `is_verified = false`, `status = pending`
 - Message shown: *"Your profile is under review. You will be notified within 24-48 hours once verified."*
 - Profile does NOT appear in public search until admin verification
-

6. FACILITY ONBOARDING (5-STEP FLOW)

Step 1 — Facility Information

- Facility name
- Facility type (dropdown: Hospital, Clinic, Diagnostic Lab, Pharmacy, Dental Clinic, Eye Clinic, Fertility Clinic, Physiotherapy Centre, Mental Health Centre, Other)
- Description of services (max 500 characters)
- Year established (optional)

Step 2 — Location Details

- Full address, Lagos area dropdown
- Google Maps pin placement (search address → drop pin → lat/long auto-saved)
- Phone, WhatsApp, email
- Website URL (optional)

Step 3 — Facility Details

- Opening hours
- Services offered (multi-select tags, custom tags allowed)
- Emergency services toggle
- Ambulance toggle
- NHIS acceptance toggle

Step 4 — Documents and Photos

- Facility logo upload
- Up to 5 facility photos
- HEFAMAA license number (optional)
- CAC registration number (optional)

Step 5 — Confirmation

- Summary of all details
 - On submit: facility saved with `is_verified = false , status = pending`
 - Message: *"Your facility listing is under review. We will verify your details and notify you within 24-48 hours."*
 - Facility does NOT appear in public search until admin verification
-

7. HOMEPAGE

7.1 Navigation Bar

- Logo (links to homepage from every page)
- Links: Find a Doctor, Find a Facility, For Practitioners, For Facilities, About
- Login / Sign Up buttons
- Mobile: hamburger menu containing all links

7.2 Hero Section

- Headline and subheadline introducing verified discovery and booking across Lagos
- Search bar with toggle: Practitioners ↔ Facilities
- Conditional dropdown: Specialty (if Practitioners) or Facility Type (if Facilities)
- Lagos area dropdown
- Search button → redirects to filtered search results
- Trust indicators below search bar

7.3 How It Works

Three-step explainer: search → view verified profiles → book or get directions

7.4 Browse by Specialty

- Grid of clickable specialty cards (see Section 11)
- Clicking a card redirects to search results filtered by that exact specialty value, ensuring database values and search filter values match exactly

7.5 Browse by Facility Type

- Grid of clickable facility type cards → filtered facility search results

7.6 For Practitioners Section

- Benefits list + "Join as a Practitioner" CTA → practitioner signup

7.7 For Facilities Section

- Benefits list + "List Your Facility" CTA → facility signup

7.8 Footer

- Logo, links to About, Contact, Privacy Policy, Terms of Service, Safety Centre, For Practitioners, For Facilities
 - Copyright: "© 2026 Aidar — EML Global Ventures Limited. All rights reserved."
-

8. SEARCH & DISCOVERY

8.1 Practitioners Search Results

Each card displays: profile photo, full name, specialty, Lagos area, consultation fee, years of experience, verified badge, home visits badge (if applicable), virtual consultation badge (if applicable), star rating + review count, Book Now button.

Filters: Verified only, Offers home visits, Offers virtual consultations, Consultation fee range

Sort options: Rating, Fee (low–high), Fee (high–low), Newest

Only verified practitioners (`is_verified = true`) appear in results.

8.2 Facilities Search Results

Each card displays: facility logo, name, facility type badge, Lagos area, opening hours, first 3 services (+X more), verified badge, emergency services badge, NHIS badge, Call/WhatsApp/View Profile buttons.

Filters: Facility type, Has emergency services, Accepts NHIS, Verified only

Only verified facilities (`is_verified = true`) appear in results.

8.3 Map View

- Toggle between List View and Map View on both Practitioners and Facilities tabs
- Google Maps with pins for all results
- Tapping a pin shows: name, type, ETA by car and on foot (from user's current location), View Profile button, Directions button (opens Google Maps app)
- "Near Me" button recenters map on user location
- Graceful fallback if location access is denied

9. PRACTITIONER PUBLIC PROFILE

Section	Contents
Hero	Photo, name, specialty, verified badge, star rating + review count, Lagos area, years of experience, MDCN registration number
About	Bio, qualifications
Consultation Details	Clinic visit fee; home visit fee (if offered); virtual consultation fee + platform (if offered)
Booking Buttons	Book Clinic Visit (always); Book Home Visit (only if <code>offers_home_visits = true</code>); Book Virtual Consultation (only if <code>offers_virtual = true</code>) — all hidden for non-patient logged-in users
Location	Lagos area, address, embedded Google Map (general area), Get Directions
Nearby Practitioners	Up to 3 other verified practitioners in the same Lagos area and specialty, excluding the current profile; section hidden if none exist
Reviews	Average rating, total count, rating breakdown by star, sortable (Most recent / Highest rating / Lowest rating), individual reviews show patient first name only, star rating, text, time posted, booking type

Share	Copy-to-clipboard share button
-------	--------------------------------

This profile's photo also functions as the clickable header in a patient's chat conversation with this practitioner (see Section 17).

10. FACILITY PUBLIC PROFILE

Section	Contents
Hero	Logo, cover photo, name, facility type badge, verified badge, emergency services badge, NHIS badge, Lagos area, address, opening hours
Photo Gallery	Grid of up to 5 uploaded photos, tap to enlarge on mobile
About	Description, year established, services offered as tags
Location & Directions	Embedded Google Map with exact pin; Drive tab (ETA, distance, route); Walk tab (ETA, distance); Open in Google Maps; Refresh My Location; fallback message if location denied
Contact	Call, WhatsApp (pre-filled message), Email, Website (if provided)
Nearby Facilities	Up to 3 other verified facilities in the same Lagos area

11. SPECIALTY LIST

The platform uses practitioner-title naming (not field names) consistently across signup, onboarding, search filters, homepage browse cards, and the database. The full list:

Doctor, Dentist, Nurse, Midwife, Pharmacist, Physiotherapist, Optometrist, Psychiatrist, Psychologist, Counsellor, Cardiologist, Dermatologist, Paediatrician, Gynaecologist, Obstetrician, Surgeon, Orthopaedic Surgeon, ENT Specialist, Neurologist, Urologist, Gastroenterologist, Pulmonologist, Endocrinologist, Oncologist, Nephrologist, Rheumatologist, Haematologist, Radiologist, Anaesthetist, Dietitian, Nutritionist, Speech Therapist, Occupational Therapist, Medical Laboratory Scientist, Radiographer, Community Health Officer, Mental Health Nurse, Fertility Specialist, Plastic Surgeon, Ophthalmologist

The most common specialties are featured prominently on the homepage Browse by Specialty section: Doctor, Dentist, Physiotherapist, Pharmacist, Optometrist, Psychiatrist, Paediatrician, Gynaecologist, Cardiologist, Dermatologist, Nutritionist, Dietitian, Surgeon, Neurologist, Mental Health Nurse, Fertility Specialist.

The value stored in the database for a practitioner's specialty matches exactly the value used in search filtering and homepage card links — there is no mismatch between stored and searched values.

12. BOOKING SYSTEM

12.1 Booking Access Restriction

Only `user_type = "patient"` accounts can initiate bookings. Practitioners and facilities retain full search/discovery access (search, map, profiles, directions, Call/WhatsApp/Email contact buttons) but:

- Booking buttons (Book Clinic Visit, Book Home Visit, Book Virtual Consultation, Book Now on search cards) are completely hidden — not greyed out — for logged-in practitioners/facilities
- Backend API calls to create a booking are blocked for non-patient `user_type`, with the message: *"Booking is only available for patient accounts. If you are a patient please log in to your patient account to make a booking."*

12.2 Date and Time Slot Selection

The booking modal uses a 30-minute time slot system organized into three collapsible groups:

- **Morning (8:00am–11:30am):** 8:00, 8:30, 9:00, 9:30, 10:00, 10:30, 11:00, 11:30
- **Afternoon (12:00pm–3:30pm):** 12:00, 12:30, 1:00, 1:30, 2:00, 2:30, 3:00, 3:30
- **Evening (4:00pm–7:00pm):** 4:00, 4:30, 5:00, 5:30, 6:00, 6:30, 7:00

Display:

- Each group shown under a section header (Morning / Afternoon / Evening)
- Slots displayed as a grid of selectable buttons — 4 columns on desktop, 3 columns on mobile
- Tapping a slot highlights it in the platform's primary colour; only one slot can be selected

at a time

- A summary line above the Confirm Booking button confirms the selection: *"Selected: [date] at [time]"* (e.g., "Selected: Monday 2 June at 2:30pm")

Behaviour:

- Slots already booked by another patient appear in grey with a strikethrough and are unselectable (no tooltip)
- If the selected date is today, past time slots are hidden; if none remain, the patient is prompted to choose a different date: *"No more slots available today. Please select a future date."*
- Sundays show no time slots, with the message: *"Appointments are not available on Sundays. Please select a different date."*
- Double-booking prevention: if two patients attempt the same slot simultaneously, only the first confirmed payment succeeds; the second sees *"Sorry this slot was just booked by another patient. Please select a different time slot,"* and is returned to slot selection with that slot now shown as unavailable

12.3 Practitioner Availability & Calendar Scheduling System

Accessible via the "Manage Availability" button on the practitioner dashboard (previously a non-functional placeholder, now fully active). This system gives practitioners lightweight, non-breaking control over which dates and days patients can book, without requiring a full real-time per-slot calendar (that level of granularity remains a post-funding roadmap item — see Section 29).

Section 1 — Working Days

Seven toggles, one per day of the week (Monday–Sunday). The practitioner enables the days they work; disabled days are excluded from patient booking entirely. Saved to `availability_settings.working_days`.

Section 2 — Working Hours

Two dropdowns — Start Time and End Time — each offering 30-minute increments from 6:00am to 10:00pm. Validation enforces that End Time must be later than Start Time, with the error: *"End time must be after your start time."* Saved to `availability_settings.start_time / end_time`.

A single **Save Schedule** button persists both Working Days and Working Hours together, with confirmation: *"Your schedule has been saved successfully."* On reopening, the form is pre-filled with any previously saved schedule.

Section 3 — Block Specific Dates

- **Single date blocking:** date picker (no past dates) + optional reason (e.g., "On leave," "Public holiday," "Personal commitment," "Travel," "Fully booked externally") → **Block This Date** button, saved to `blocked_dates`
- **Date range blocking:** start date + end date pickers → **Block Date Range** button; each date in the range is saved as an individual `blocked_dates` row, but displayed in the UI as a single grouped entry (e.g., "10 June — 15 June 2026 (6 days) — On leave") with one **Unblock All** action that removes every date in that range
- Below the pickers, a list of all currently blocked future dates is shown, each with an **Unblock** action; if none exist: "No dates blocked. Use the date picker above to close specific dates."

Dashboard Summary

At the top of the Availability Manager, a summary banner reads: "Your schedule: [Working days listed, e.g., Monday, Wednesday, Friday], [Start time] to [End time], [X] dates blocked."

If no schedule has been saved yet: "You have not set your availability yet. Set your working days and hours above so patients know when you are available."

Effect on the Patient Booking Calendar

- Dates that fall on a day NOT in the practitioner's `working_days` are greyed out and unselectable, with tooltip: "Not available on this day"
- Dates present in `blocked_dates` for that practitioner are greyed out and unselectable, with tooltip: "Not available on this date"
- **Non-breaking fallback:** if a practitioner has not yet configured availability, all dates remain selectable exactly as before — the booking flow for practitioners without availability set is unaffected

The Availability Manager is fully responsive on mobile.

12.4 Clinic Visit Booking

1. Patient clicks Book Clinic Visit (login required)
2. Modal shows: practitioner photo/name/specialty, "Clinic Visit" label, fee, calendar date picker (no past dates, no Sundays, respects availability per 12.3), 30-minute time slot grid (per 12.2), optional notes (max 300 chars), pre-filled patient name/phone, "Payment Secured by Paystack" badge
3. Confirm Booking → Paystack popup → payment, with `practitioner_id`, `patient_id`,

booking date/time/type, and amount passed as Paystack metadata so the booking can be reliably created post-payment regardless of device/browser

4. **On success:** booking saved (`status = pending , payment_status = paid`); a confirmation screen is shown with booking details and a **"Message [Practitioner Name]"** button that opens the in-app chat conversation with this practitioner, pre-filled with the booking details (see Section 17) — this is a deliberate, user-initiated click to avoid popup-blocker issues
5. **On failure:** booking not saved; error shown: *"Payment was not completed. Please try again."*

12.5 Home Visit Booking

ID Verification Gate (first-time home visit bookers):

- Explanation of why ID is required
- ID type dropdown: National ID, Driver's License, International Passport, Voter's Card, BVN
- ID number, ID photo upload, selfie-with-ID upload
- Full home address for visit + nearest landmark (optional)
- Required consent checkbox
- On submit: *"Your ID has been submitted for review. You will be notified within 24 hours."*
- Pending/rejected states show appropriate status messages and (for rejected) a resubmit option

Once Verified:

- "Identity Verified" badge shown
- Booking modal proceeds with home visit fee, home address field, landmark field, and a safety notice
- Same time slot, availability, payment, and post-booking "Message Practitioner" flow as Section 12.4

12.6 Virtual Consultation Booking

- Modal shows "Virtual Consultation" label with camera icon, fee, video platform, date/time selection (per 12.2/12.3), notes field for health concern, pre-filled name/email
- On success: booking saved (`type = virtual_consultation`); confirmation message:

"Virtual consultation booked! The practitioner will send you a meeting link at least 1 hour before your appointment."; same "Message Practitioner" chat entry point as 12.4

- Patient dashboard shows "Awaiting Meeting Link" status until practitioner adds a link; once added, "Join Consultation" button activates with a countdown timer to the session

12.7 Booking Lifecycle & Statuses

Bookings move through the following statuses: `pending` → `confirmed` → `in_progress` → `awaiting_confirmation` → `completed`, with alternate paths to `cancelled`, `cancelled_no_show`, `disputed`, and `requires_review`.

A `pg_cron` job runs every 15 minutes calling an `auto-complete-bookings` Supabase Edge Function to automatically progress eligible bookings (e.g., move past-appointment bookings to `awaiting_confirmation` / `completed`). This endpoint is secured with a `CRON_SECRET` header check, returning 401 Unauthorized for unauthenticated calls.

Booking status transitions also directly affect whether a patient-practitioner conversation accepts new messages (see Section 17.3).

12.8 Booking Cancellation Policy

Timing	Refund	Practitioner Compensation
More than 2 hours before appointment	Full refund to patient	None
Less than 2 hours before appointment	No refund to patient	50% of consultation fee

Cancellation updates booking status to `cancelled`, updates the practitioner's "Cancelled" stat, and notifies both parties.

12.9 Raise Dispute

Available on a booking from the patient dashboard (hidden on bookings already disputed, completed, or cancelled; one dispute per booking maximum).

- Modal shows booking details + reason dropdown (Practitioner did not show up / Practitioner was late / Service not as described / I feel unsafe / Payment issue / Other) + optional details field (max 500 characters)
- On submit: booking status → `disputed`; practitioner payout frozen; patient sees: "Your

dispute has been received. Our team will contact you within 2 hours."

- Disputed bookings appear in the admin Bookings tab under a highlighted Disputes section with resolution actions (Release to Practitioner, Refund Patient, Partial Resolution)

13. PATIENT DASHBOARD

Element	Description
Welcome message	Patient's first name
Search bar	Toggle between Practitioners/Facilities
Tabs	Upcoming Bookings (default), Booking History
Upcoming Bookings	Practitioner photo/name, specialty, date/time, type icon, status badge, amount paid; virtual bookings show Join Consultation / Awaiting Meeting Link / countdown timer; Cancel button (if >2 hrs out); Raise Dispute button
Booking History	Practitioner photo/name, specialty, date/time, type, status (completed/cancelled), amount, booking reference, "Leave Review" button (for completed bookings without a review)
Review Prompt	Card prompting review after a booking is marked complete: <i>"How was your experience with [Practitioner Name]? Leave a review"</i>
Quick Actions	Find a Doctor, Find a Facility, Edit Profile
Chat Access	Floating chat icon (bottom-left, all pages) opens conversations with practitioners — see Section 17

Note: Stats cards (Total/Pending/Completed/Cancelled) are **practitioner-only** and do not appear on the patient dashboard.

14. PRACTITIONER DASHBOARD

Element	Description
---------	-------------

Profile Overview	Photo, name, specialty, verification status (Pending Verification — orange / Verified — green)
Stats Cards	Total Bookings, Pending, Completed, Cancelled — update live as booking actions occur
Tabs	Upcoming Bookings, Booking History
Upcoming Bookings	Patient name, date/time, type, amount, status; for home visits — Patient Verified badge + full verified contact details; action buttons vary by type/status: Confirm Booking, Start Visit, End Visit/End Session, Mark as Complete, Cancel Booking; virtual bookings include “Add Meeting Link” field with Save; each card also includes a “Message Patient” button (see Section 17)
Booking History	Patient name, date/time, type, status (completed/cancelled/disputed), amount, reference
Reviews Tab	Summary card (average rating, total reviews, star-by-star breakdown); individual reviews list (patient first name, rating, text, time posted, booking type); sort by Most Recent / Highest Rating / Lowest Rating; in-app notification badge for new unread reviews, clearing on tab open; empty state if no reviews
Availability Manager (“Manage Availability”)	Full working days/hours and blocked-dates calendar scheduling system — see Section 12.3
Earnings Tab	Lifetime earnings + date-filtered earnings breakdown — see Section 18.1
Payouts Tab	Read-only payout history — see Section 18.2
Chat Access	Floating chat icon (bottom-left, all pages) opens conversations with patients — see Section 17
Quick Actions	Edit Profile, View My Public Profile

15. FACILITY DASHBOARD

Element	Description
---------	-------------

Header	Facility logo, name, type, verification status (Pending — orange / Verified — green)
Stats Cards	Total profile views, total enquiries, total WhatsApp contacts
Quick Actions	Edit Facility Profile, View Public Profile, Upload New Photos
Tips Card	Onboarding/optimization tips for new facilities

Facilities do not have access to the chat system, earnings/payouts, or the availability manager — these are patient↔practitioner and practitioner-only features respectively.

16. REVIEWS SYSTEM

- Triggered after a booking is marked `completed`
 - Review modal: interactive 1–5 star selector, optional text (max 300 characters), Submit
 - Saved to `reviews` table; immediately reflected on the practitioner’s public profile and search result cards (average rating recalculation)
 - Patients can submit only one review per booking
 - Reviews display patient first name only (privacy)
 - Sortable on both the practitioner’s public profile (patient-facing) and the practitioner dashboard Reviews tab (Most Recent / Highest / Lowest)
-

17. MESSAGING & CHAT SYSTEM (PATIENT ↔ PRACTITIONER)

A persistent, booking-scoped chat system enables coordination between patients and practitioners while deliberately limiting open-ended pre-booking communication — preserving Aidar’s role as the trust and transaction layer.

17.1 Conversation Model

There is exactly **one conversation per patient–practitioner pair**, persisting permanently across all bookings ever made between that pair (enforced via a `UNIQUE(patient_id, practitioner_id)` constraint on `conversations`). A conversation is created automatically the first time a booking is successfully paid for between a given patient and practitioner;

subsequent bookings between the same pair reuse the existing conversation and its full message history.

17.2 Floating Chat Icon

A floating chat icon hovers at the bottom-left of the screen on all pages, visible only to logged-in patients and practitioners (not facilities or logged-out users). It displays an unread-message count badge. Clicking opens the chat panel — a slide-in panel on desktop, full-screen on mobile.

17.3 Active vs Read-Only Conversations

An **active booking** is any booking between the pair with status `pending`, `confirmed`, `in_progress`, or `awaiting_confirmation`.

- **If at least one active booking exists** between the patient and practitioner: the message input field and Send button are shown and enabled.
- **If no active booking exists** (all bookings between them are `completed`, `cancelled`, `cancelled_no_show`, or `disputed`): the input field and Send button are hidden entirely, and a banner reads: *"This conversation is closed. You can still view your chat history. You'll be able to message again once you have a new booking with this practitioner."*

All previous messages remain fully visible and scrollable regardless of active status. This status is re-evaluated whenever the conversation is opened, and updates live if a booking's status changes while the conversation is open (e.g., a practitioner marking a booking complete while the patient has the chat open causes the input to disappear immediately). This logic applies identically on both sides.

17.4 Chat List View

Patient side — one row per practitioner ever booked: practitioner profile photo, name, specialty, last message preview + timestamp, unread indicator, and an "Active" / "Closed" status label.

Practitioner side — one row per patient ever booked: patient profile photo, name, last message preview + timestamp, unread indicator, and the same "Active" / "Closed" label.

Both lists sort by most recent message activity. Empty state: *"No conversations yet. Chats will appear here after you make or receive a booking."*

17.5 Chat Window

Header shows the other party's profile photo, name, and (patient side only) specialty, plus a status label ("Active booking" / "No active booking"). The message thread shows the full

chronological history across all bookings ever made between the pair, with the user's own messages right-aligned and the other party's left-aligned, each timestamped. The input field (when shown) supports up to 1,000 characters.

Profile link (patient side only): the practitioner's profile photo in the chat header is clickable and opens their public profile (Section 9). The reverse is not true — patient photos are not clickable from the practitioner side.

17.6 Entry Points

- **"Message [Practitioner Name]"** — shown on the booking confirmation screen after successful payment (Sections 12.4–12.6). This is the replacement for the earlier WhatsApp redirect for patient↔practitioner communication. Opens the chat panel directly to this practitioner's conversation, with the input pre-filled (editable, not auto-sent) with: *"Hi [Practitioner Name], I just booked a [booking type] appointment with you on Aidar for [date] at [time]. Booking reference: [reference]."* Since this booking is newly active, the input is enabled.
- **"Message Patient"** — shown on each upcoming booking card on the practitioner dashboard (Section 14). Opens the chat panel directly to this patient's conversation, input enabled (the triggering booking is active).

Note: WhatsApp Call/WhatsApp contact buttons on **facility** profiles (Section 10) are unaffected and remain — the chat system applies only to patient↔practitioner relationships.

17.7 Real-Time Behaviour & Read Status

Implemented via **Supabase Realtime** subscriptions:

- New messages appear instantly in an open conversation without refresh
- Unread counts update live on the chat list and the floating icon badge
- Active/closed status and input visibility update live if the relevant booking's status changes mid-conversation

Opening a conversation marks all of the other party's messages as read (`read_at` populated); unread badges reflect only genuinely unread messages.

The entire chat feature matches the platform's existing visual style and is fully responsive on mobile.

18. EARNINGS & PAYOUTS SYSTEM (PRACTITIONER

DASHBOARD)

A deliberately understated, non-promotional reporting layer giving practitioners visibility into what they've earned and what's been paid out — derived primarily from existing `bookings` data plus a new manually-populated `payouts` log.

18.1 Earnings Tab

- **Lifetime Earnings:** a single plain figure (e.g., "₦142,000") representing the sum of all `completed + payment_status = paid` bookings for this practitioner
- **Date range filter:** a calendar/date-range picker filters the view to a specific period
- For the selected period: total earnings for that period, plus a simple itemised list of contributing bookings (date, patient name, booking type, amount)
- Empty state: *"No earnings recorded for this period."*
- Styling is intentionally plain and consistent with the rest of the dashboard — numbers and a list, no celebratory or gamified design elements

18.2 Payouts Tab

- Read-only table of payout records: Date, Amount, Reference (if provided)
- Empty state: *"No payouts have been processed yet. Payouts are processed manually by our team."*
- Practitioners can view but not edit payout records

18.3 Admin-Side Payout Recording

On each practitioner's detail page in the admin dashboard (Section 19.2), admin can use a **"Record Payout"** form (amount, date, optional reference/note) to log a manual bank transfer. Saved entries appear immediately in that practitioner's Payouts tab. This complements the bank details already captured during onboarding (Section 5, Step 4) and surfaced to admin for processing transfers.

This system tracks payout records but does not itself move money — actual disbursement remains a manual bank transfer process by admin until automated Paystack subaccount splits are implemented post-funding (Section 29).

19. ADMIN DASHBOARD

Accessible only at `/admin` ; non-admin users attempting to access this route are redirected to the homepage. Admin access is granted via a `user_roles` table entry.

19.1 Overview Tab

Stats cards: total/verified/pending/rejected practitioners, total/verified facilities, total/verified patients, total bookings, total revenue processed.

Alerts section: practitioners with high cancellation rates, disputed bookings, or "requires review" bookings; top performing practitioners; patients with high cancellation rates, multiple disputes, flagged ID, or pending ID >24 hours.

19.2 Practitioners Tab

- **Pending Verification Queue:** full details + MDCN certificate link; Verify / Reject / Request More Info actions
- **Approved Practitioners:** table with View Details → individual page showing booking stats, full booking history, performance metrics, bank/payment details, **Record Payout form** (Section 18.3), admin actions (Suspend, Remove, Send Warning, Mark as Featured, View Public Profile), CSV export
- **Rejected Practitioners:** table with Reinstate action

19.3 Facilities Tab

Mirrors the practitioners tab structure (pending queue with photos/documents, approved table with detail pages, rejected table with reinstate).

19.4 Patients Tab

- **ID Verification Queue:** full name, email, phone, ID type/number, uploaded ID document and selfie (full-size viewable), submission date, Approve ID / Reject ID (with required reason) / Flag as Suspicious
- **All Patients table:** detail page per patient showing booking stats, full booking history, risk assessment (cancellation rate, dispute rate, late cancellation rate, overall risk level Low/Medium/High), ID verification details, admin actions (Verify ID, Reject ID, Flag Account, Suspend, Remove, Send Warning)

19.5 Bookings Tab

- Full bookings table: reference, patient name/phone, practitioner name/phone, date, time slot, type, home address (for home visits), status (color-coded), payment status, amount, created date

- Filters: status, type, date range, Lagos area
- **Disputes section:** highlighted in red, full booking + dispute details, both parties' contact info, Release to Practitioner / Refund Patient / Partial Resolution actions
- **Requires Review section:** bookings auto-flagged for manual review

19.6 Bank Details Integration (Admin)

Practitioner bank details (bank name, account number, account name, verification status) are surfaced in: the verification queue, the practitioner detail page, the Bookings tab payout reference for completed bookings, and CSV exports — for manual payout processing. Bank details remain hidden from all patient-facing surfaces and patient-facing emails at all times.

20. SAFETY CENTRE (/safety)

For Patients:

- Only verified practitioners appear on the platform
- Payment secured and only released after visit
- All practitioners are MDCN verified
- Rate and review after every visit
- Cancel up to 2 hours before for full refund

For Practitioners:

- All home visit patients are ID verified
- Full verified patient details provided before accepting
- Can decline any booking without penalty
- Payment guaranteed before leaving for a home visit
- SOS button available during visits
- Live location shared with emergency contact

Virtual Consultations:

- Payment secured until consultation is complete
- Meeting link sent at least 1 hour before session

- Cancel up to 2 hours before for full refund

21. STATIC PAGES

- **Privacy Policy** (</privacy-policy>)
- **Terms of Service** (</terms>)

Both reflect the Aidar brand name and EML Global Ventures Limited as the operating entity, and are linked from the footer on every page.

22. PAYMENTS & MONETIZATION

22.1 Payment Processing

- Paystack integration (currently test mode, under EML's existing Paystack account)
- Used for: booking payments (with full booking metadata attached to each transaction — see Section 12.4), bank account resolution during practitioner onboarding
- Split payments/subaccounts (85/15 automatic split) are planned post pre-seed; currently payouts are processed manually by admin using bank details surfaced in the admin dashboard and logged via the Earnings & Payouts system (Section 18)

22.2 Revenue Model

Stream	Mechanism	Stage
Patient booking fee	₦1,000 per confirmed booking	From launch
Platform commission	15% of consultation fee	From launch
Practitioner premium subscription	₦10,000/month	Year 2+

Example unit economics: an ₦8,000 consultation generates ₦1,200 commission + ₦1,000 booking fee = ₦2,200 platform revenue per booking.

23. EMAIL NOTIFICATIONS

23.1 Current State

Only Supabase Auth default emails are confirmed functional:

- Signup confirmation
- Password reset

These are being migrated to send via **Resend** (custom domain

`notifications.getaidar.com` , region: Ireland/eu-west-1) for branded, deliverable transactional email, with Supabase Auth SMTP reconfigured to route through Resend.

23.2 Planned/Designed (Status: To Be Audited and Built)

The following notification types were specified but require an audit to confirm build status before further work:

- Practitioner: application received, approved, rejected, suspended, reinstated, removed, new booking received, admin requests more info
- Facility: application received, approved, rejected, suspended, reinstated, removed, admin requests more info
- Patient: welcome email, ID verification submitted/approved/rejected, account flagged/removed, booking confirmed/cancelled
- Booking events: confirmed, cancelled, visit started, awaiting confirmation, completed (with review prompt to patient / payout info to practitioner), dispute raised (admin/practitioner/patient), virtual meeting link added, new review received (in-app badge confirmed; email notification deprioritized)
- Admin notifications: new practitioner/facility registered, new ID submitted, new booking, new dispute

Note: in-app chat (Section 17) reduces but does not eliminate the need for email notifications — email remains the channel for verification status, disputes, and other events outside an active conversation.

24. DATABASE SCHEMA (KEY TABLES)

Table	Purpose	Key Fields
	Core user record for	<code>id</code> , <code>user_type</code> , <code>full_name</code> , <code>email</code> ,

profiles	all user types	phone_number
practitioners	Practitioner-specific data	specialty, qualifications, MDCN number, fees, offers_home_visits , offers_virtual , is_verified , status , bank_name , account_number , account_name , bank_details_verified
facilities	Facility-specific data	facility type, location (lat/long), services, is_verified , status , photos, license numbers
bookings	All booking records	type (clinic/home/virtual), date, time slot, status, payment_status, amount, patient/practitioner refs
reviews	Patient reviews of practitioners	rating, text, booking_id reference
patient_verifications	Home-visit ID verification records	ID type/number, document URLs, selfie URL, status
availability_settings	Practitioner working schedule	practitioner_id , working_days (array), start_time , end_time , updated_at
blocked_dates	Practitioner-blocked dates (single and range)	practitioner_id , blocked_date , reason , range_start , range_end , created_at
conversations	One persistent thread per patient–practitioner pair	patient_id , practitioner_id (UNIQUE pair), created_at , last_message_at
	Individual	conversation_id , sender_id , sender_type , message_text ,

messages	chat messages	related_booking_id, created_at, read_at
payouts	Manual payout log for practitioners	practitioner_id, amount, payout_date, reference, notes, created_at
user_roles	Admin role assignments	user_id, role
waitlist_patients (planned)	Pre-launch patient waitlist	name, email, phone, Lagos area, specialist needed, position
waitlist_practitioners (planned)	Pre-launch practitioner waitlist	name, email, phone, specialty, Lagos area, practice type, position

Row Level Security (RLS) is enabled on all tables. Patients can only access their own data; practitioners can only access their own bookings and conversations; `conversations / messages` access is scoped so each party can only read threads where they are the named `patient_id` or `practitioner_id`; admin routes are protected against direct URL access by non-admins.

25. TECHNICAL ARCHITECTURE & INTEGRATIONS

Aidar is generated and maintained via **Lovable.dev**, which produces a standard modern React/Supabase application. The exact stack Lovable uses for this project:

Layer	Technology
Frontend framework	React 18 + TypeScript
Build tool	Vite
Styling	Tailwind CSS
UI component library	shadcn/ui (built on Radix UI primitives)

Icons	Lucide-react
Routing	React Router
Data fetching & caching	TanStack Query (React Query)
Forms & validation	React Hook Form + Zod
Database	Supabase (PostgreSQL), project ref <code>sgawctyyymfjtaphabwp</code>
Authentication	Supabase Auth (bcrypt password hashing, RLS enforced)
File storage	Supabase Storage — profile photos, MDCN certificates, ID documents/selfies, facility photos/logos
Serverless functions	Supabase Edge Functions (e.g., <code>auto-complete-bookings</code>)
Real-time	Supabase Realtime — powers the chat system (Section 17)
Scheduled jobs	Supabase <code>pg_cron</code> , every 15 minutes, secured via <code>CRON_SECRET</code>
Payments	Paystack (test mode; transaction metadata carries booking context end-to-end)
Maps & location	Google Maps Platform — Maps JavaScript API (client-side, referrer-restricted key), Directions API / Distance Matrix API / Routes API (server-side, separate unrestricted-but-API-scoped key)
Transactional email	Resend — domain <code>notifications.getaidar.com</code> , region Ireland (eu-west-1)
Source control	GitHub (connected via Lovable's native integration)
Hosting & deployment	Lovable.dev managed hosting with automatic SSL on custom domains
Domain registrar	Namecheap — <code>getaidar.com</code> , WhoisGuard privacy enabled

Migration to a self-managed Supabase instance (separate from Lovable's managed project) is planned post-investment.

26. SECURITY

- All passwords hashed via Supabase Auth (bcrypt) — no custom password storage exists
- Row Level Security enabled on all database tables, including `conversations` and `messages`
- Sensitive fields (`account_number` , ID document URLs, selfie URLs, MDCN certificate URLs) excluded from patient-facing API responses and public profiles
- Bank details and payout records visible only to admin and the owning practitioner
- HTTPS/SSL provided automatically by Lovable on the custom domain
- `auto-complete-bookings` cron endpoint protected by `CRON_SECRET` , returning 401 on unauthorized requests
- Admin routes protected against direct URL access by non-admin accounts
- Google Maps API keys are split by use case: a referrer-restricted key for client-side map display, and a separate API-restricted (Directions/Distance Matrix/Routes only) key for server-side route calculations — preventing both key leakage abuse and referrer-related routing failures

27. BRANDING

- **Platform name:** Aidar (rebranded from working name “MedPlus”; derived from “aider” — aiding healthcare access)
- **Domain:** getaidar.com
- **Legal/operating entity:** EML Global Ventures Limited (current principal business activity covers solar, fire safety, logistics, security systems, and general contracting); incorporation of a dedicated entity — **Aidar Technologies Limited** — with a healthcare-technology business activity description is in progress
- **Tagline direction:** “Aidar — Find Verified Doctors and Medical Facilities Near You in Lagos”
- **Visual direction:** wordmark-led (“aidar” in lowercase, geometric sans-serif), a “pin + pulse” icon/monogram, a warm-teal-and-coral colour palette (differentiated from typical clinical blue healthtech branding), with Sora for headings and Manrope/Inter for body text

- All user-facing text, emails, legal pages, and metadata have been updated from "MedPlus" to "Aidar"
-

28. GLOSSARY

- **MDCN** — Medical and Dental Council of Nigeria (practitioner credential verification body)
 - **HEFAMAA** — Health Facility Monitoring and Accreditation Agency (Lagos facility licensing body)
 - **NHIS** — National Health Insurance Scheme
 - **RLS** — Row Level Security (Supabase/Postgres access control)
 - **ETA** — Estimated Time of Arrival (used in directions/maps features)
-

This document reflects the cumulative build history of the Aidar platform as developed in Lovable.dev with Lovable-managed Supabase. It should be updated as new prompts are executed and verified against the live platform.
